SquidHacker.com

Core Services - Penetration Testing

Web Applications & APIs OWASP Top 10 + API Security Top 10, business logic flaws, authentication bypasses, and full attack-chain simulation

Windows Thick Client / Native Desktop Apps .NET, WPF, UWP, and other Windows-native application security assessments (leveraging 13+ years of .NET engineering experience)

Cloud Infrastructure Assessments AWS, Azure, and GCP misconfiguration reviews, identity & access management, and cloud-specific attack paths

Android Mobile Applications In-depth static + dynamic analysis, reverse engineering, and runtime exploitation

Supply Chain & Dependency Risk Assessments Third-party library, MSP, and software/hardware supply chain threat modeling

System Hardening Reviews Linux & Windows platform hardening and configuration reviews

U.S. Based, Veteran Owned, Certified, and Insured

Why Choose SquidSec?

Premium, Founder-Led Penetration Testing • No Fluff • All Signal

Real Adversary Emulation

- Manual testing only — no reliance on automated scanners or noisy reports
- Full attack-chain simulation that mirrors real-world threats
- Deep focus on exploitable findings that actually matter

Developer-First Insight

- 13+ years of professional .NET / full-stack engineering experience
- Better understanding of code-level flaws in web, APIs, Windows thick clients, and Android apps
- Practical remediation guidance that developers can actually implement

High-Quality, Actionable Reports

- Clear, concise, and prioritized findings with proof-of-concept where appropriate
- Business impact explained — not just technical details
- Zero filler, zero checkbox compliance language

U.S. Based, Veteran Owned, Certified, and Insured

Ready to Find What Others Miss?

Get a high-signal assessment tailored to your modern attack surface.

- Web Applications & APIs
- Android Mobile Apps
- Windows Thick Client / Desktop Apps
- Cloud Infrastructure (AWS, Azure, GCP)
- Supply Chain & Dependency Risks
- System Hardening Reviews
